

ABSTRACT OF THE DISCLOSURE

A desiccant bag for adsorbing moisture from a surrounding space in a packaged product includes on its inner surface an electronic article surveillance or EAS tag which enables detection of stolen products by theft or shop-lifter detectors. The EAS tag is not visible from the outside of the bag or product package, and is thus unlikely to be detected and removed by a thief. The bag may also be printed with an invisible message or taggant containing information such as source or intended destination.
